Summary

Eric is a final-year Applied AI student at HKU with a second major in Computer Science and experience in cloud infrastructure and AI deployment. He uses AI agents to accelerate implementation while applying engineering judgment to problem selection, technology choices, code quality, testing, and deployment. He values craftsmanship and reliable results.

Education

The University of Hong Kong
Bachelor of Arts and Science in Applied Artificial Intelligence (BASc(AppliedAI)) Sep 2023 – Jul 2027

- **Honours**: First Class; **Second Major**: Computer Science
- **Awards**: Dean's Honour List (2025–26), Endeavour Merit Award (2024–25, 2025–26)

Fudan University, Shanghai, China
Exchange Student in Computer Science and Technology Sep 2026 – Jan 2027

- Deploying frontier LLMs, including DeepSeek-v4-Flash and GLM-5.3-Flash, on non-CUDA HPC GPUs using vLLM Tensor Parallelism.
- Building a dormitory homelab with software routers, DNS, and gateways; using split tunneling and gateway filtering for concurrent campus and homelab VPN access.

Skills and Certifications

Languages: Native Cantonese, fluent English and Mandarin.
Programming: Python, C/C++, Java, SQL, TypeScript, Bash, PowerShell
Full Stack Development: React.js, Next.js, Express.js, shadcn/ui, Tailwind CSS, MySQL, MongoDB, PHP
DevOps: GitHub Actions, CI/CD, Docker Compose, cloud-init, Linux, Nginx
AI/Agents: Agent Skills, MCP, GraphRAG, PyTorch, pandas, scikit-learn, AutoML (AutoGluon), LoRA, OpenCV, Codex, Claude Code
Cloud Computing: AWS, Azure, DigitalOcean, Cloudflare, Vercel
Certifications: AWS Certified AI Practitioner (Jul 2026), Cloud Practitioner (Aug 2026)

Professional Experience

FWD Group Management Holdings Limited
Summer Intern, Finance Cloud Infrastructure and Operations, Group Technology Services Jun 2026 – Aug 2026

- Assisted with **AWS** cost optimization and resource housekeeping across **Amazon WorkSpaces** and **FSx for NetApp ONTAP**.
- Automated WorkSpaces inventory reporting and cost allocation workflows using **CloudWatch**, **EventBridge**, **S3**, and **Lambda**.
- Addressed limited native FSx for NetApp ONTAP metrics by combining data from its **REST API** with **CloudWatch**; designed and documented the observability architecture.
- Supported product-manager training on internal AI agent tooling (Skills, MCP).

Radio Television Hong Kong (RTHK)
Summer Intern, Engineering Section (Broadcast Systems), Production Services Division Jun 2025 – Aug 2025

- Gained practical experience with Cantonese automatic speech recognition and object localization models.

InspireLab Limited
Summer Intern, Embedded Software May 2024 – Aug 2024

- Deployed MNIST-trained neural networks on low-cost, resource-constrained RISC-V embedded devices.

Project Experience

AI Team Member, Nocodile AI Feb 2026 – Present

- Developing a containerized, no-code YOLO object detection training pipeline on Azure A100 (80 GB) GPUs.

HKU Graduate Employment Survey RAG Agentic Chatbot (Group Project) Apr 2026 – May 2026

- Built an end-to-end agentic chatbot using curated HKU salary and degree data, GraphRAG retrieval, and agent-based reasoning to answer students' career questions.

30-Day All-Cause Hospital Readmission Prediction with MIMIC-IV (Group Project) Oct 2025 – Dec 2025

- Investigated future-data leakage flagged by SHAP analysis, narrowed it to a specific feature, and used exploratory data analysis to explain its effect on test-set predictions; explored LSTM/GRU, ModernBERT, and LoRA.

alphahku.vercel.app Jul 2025 – Aug 2025

- Developed a student organization website with Next.js, shadcn/ui, Tailwind CSS, and Vercel; applied CI/CD practices.

Reproducing RealFill (SIGGRAPH 2024) Mar 2025 – May 2025

- Automated model fine-tuning, inference, and benchmarking in a Google Colab notebook; applied MLOps practices.

PyInstaller (Open Source Development, 13.1k stars) Jul 2021 – Nov 2021

- Improved compatibility with third-party libraries by contributing custom PyInstaller hooks.
